overview

- the problem
- phenomena of rich interaction
- ? socio-technical Church Turing Hypothesis ??

the problem

- task models
 - formal description
- situatedness
 - unique contexts
- ethnography
 - rich ecologies

bringing them together?

option 1 - reject formalism

option 2 - enforce formalism

option 3 - expand and accept

phenomena

phenomena

- collaboration
- information
- triggers
- artefacts
- placeholders
- situatedness
- intentional cycle
- + continuity & duration

collaboration

- already in several notations
 - e.g. CTT
- add artefacts too ?

information

pre-planned cognitive model
goal → action

situated action
environment → action

control

- open loop control
 - no feedback
 - fragile

control

- open loop control
 - no feedback
 - fragile
- closed loop control
 - uses feedback
 - robust

adding information

triggers

process – what happens and order

triggers

process – what happens and order

triggers – when and why

artefacts

- ethnographic studies
- as shared representation
- as focus of activity
- act as triggers, information sources, etc.

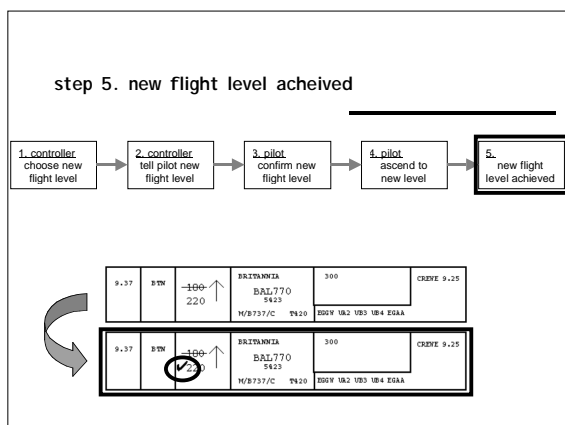

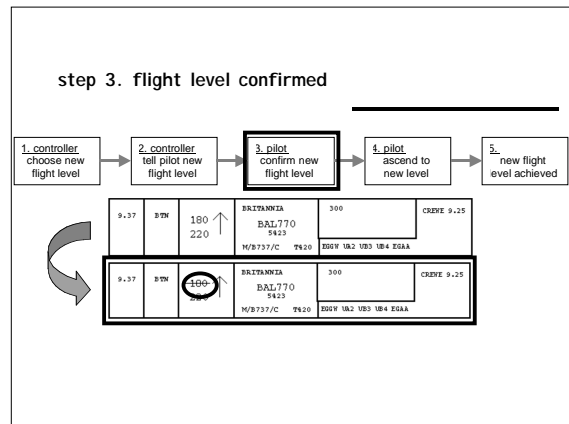

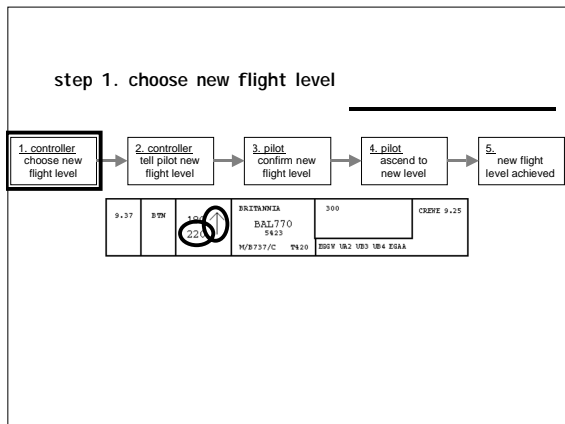

9.37	BTM	180	BRITANNIA BAL770 5423	300	CREWE 9.25
			M/B737/C T420	EGG W UA2 UB3 UB4 EGAA	

placeholders

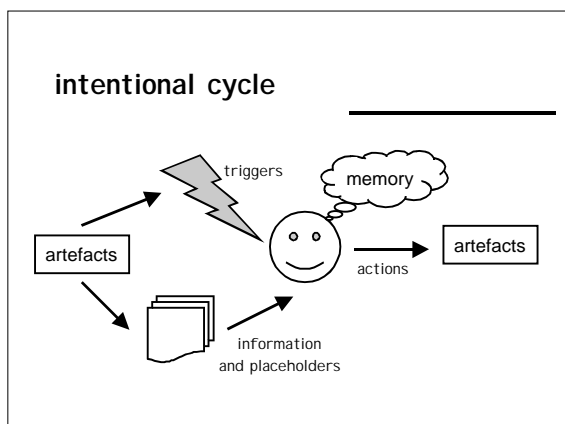

- knowing where you are in a process
 - like a program counter
- coding:
 - memory
 - explicit (e.g. to do list)
 - in artefacts

where are you?

- ### continuity & duration
- system models – event centric
 - status–event analysis
 - continuous time (status) and discrete (events)
 - many generic issues and phenomena
 - task models:
 - in the annotations and descriptions
 - concurrency – true or interleaved?

the socio-organisational Church-Turing hypothesis

the Church-Turing thesis

- the THEOREM
 - Church's lambda calculus and Turing machines are 'equivalent'
- the POSTULATE
 - all computation is 'equivalent'

organisations

- are political, social, economic ...
but are also ...
- information processing entities
so ...

the socio-organisational Church-Turing hypothesis

similarities to computers and cognition

- computational power
- computational structure 

the organisation as a computer

- computer: program and data
- organisation: process and information plus ...
- computer data: LTM, STM, program counter
- organisation: ????
files, papers ... placeholders

parallels

	computer	cog sci	organisation
process	program	procedural memory	processes
data	data	LTM	files
placeholder	program counter	STM, activation	location of artefacts
initiative	interrupts, events	stimuli	triggers
