Berlin 12th Feb 2008

designing to be used

- design for adoption
- design for appropriation

Berlin 12th Feb 2008

three use words

- **useful**
 - functional, does things
- **usable**
 - easy to do things, does the right things
 - include ongoing experience
- **used**
 - attractive, available, acceptable to organisation

Berlin 12th Feb 2008

adoption

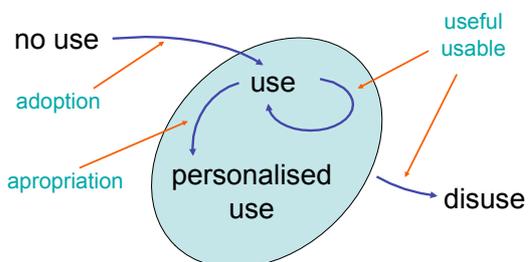

- getting initially used

appropriation

- getting eventually USED

Berlin 12th Feb 2008

dynamics of use

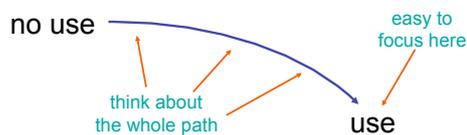

Berlin 12th Feb 2008

designing for adoption

Berlin 12th Feb 2008

managing the path

- marketing life cycle: 'early adopters', etc.
- how 'design' it in
- just think

Berlin 12th Feb 2008

if you are big

- just stick it in the OS (Microsoft, Apple)
- or stick it on your web site (Google, Yahoo!)
- does NOT guarantee use
(e.g. Apple OpenDoc, automator)
... but it does help ;-)

Berlin 12th Feb 2008

if not ...

you have to think harder!

Berlin 12th Feb 2008

if you want someone to do something ...

- make it easy for them!
- understand their values

Berlin 12th Feb 2008

designing for value

people use something

ONLY IF
it has perceived value
AND
value exceeds cost

BUT NOTE

- exceptions (e.g. habit)
- value **NOT** necessarily personal gain or money

Berlin 12th Feb 2008

weighing up value

value

- helps me get my work done
- fun
- good for others

cost

- download time
- money £, \$, €
- learning effort

Berlin 12th Feb 2008

value depends on time

- in economics Net Present Value:
 - discount by $(1+rate)^{years}$ to wait
- in life people heavily discount
 - future value and future cost
 - hence resistance to learning
 - need low barriers and high **perceived present value**

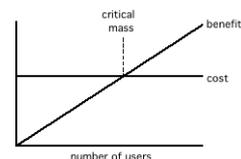

Berlin 12th Feb 2008

value depends on other people

- network effects
 - value of Word for **ME** is higher if **YOU** have it too

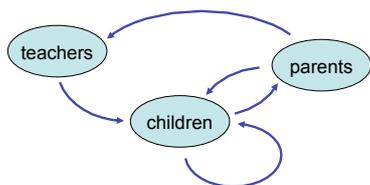

critical mass (Grudin)

- ✓ reduce initial cost
- ✓ increase initial value
- ✓ find cliques

Berlin 12th Feb 2008

different kinds of people – market ecologies

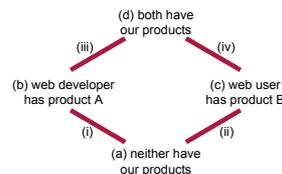

- critical issues:
- fan-out (gain)
 - feedback loops (exponential growth)
 - adding paths (information products)

Berlin 12th Feb 2008

lattice of value

- two groups (example):
 - developers
 - users
- each need value on their own
 - otherwise initial use
- need more value for both
 - to encourage growth

Berlin 12th Feb 2008

example – HCI book search

- value for people *who have* the book
 - helps you to look up things
 - chapter and page number
- value for those *who don't* ...
 - sort of online mini-encyclopaedia
 - full paragraph of context

... but also says "buy me"!!

... but also says "buy me"!!

2008

organisational design

- coercion
 - tell them what to do!
 - value = keep your job
- enculturation
 - explain corporate values
 - establish support (e.g share options)
- emergence
 - design process so that individuals value → organisational value

Berlin 12th Feb 2008

design guidelines ? ... some ideas ...

- think about the path
- increase zero point value
- identify cliques
- understand relationships
- create community value
- leverage existing products

Andy Cockburn's
PhD thesis

Berlin 12th Feb 2008

designing for appropriation

Berlin 12th Feb 2008

motivation

- appropriation in many studies
- growing literature
 - Dourish lots, also Jennie Carroll (?Melbourne),
 - several workshops, Illyenkov (cultural timescale)
 - ... but hard to find explicit guidance

? how to pass on to students ...

Berlin 12th Feb 2008

why appropriation?

- + situatedness – every environment different
- + dynamics – environments and needs change
- + ownership – feelings of control, pride
- ? subversion

Berlin 12th Feb 2008

design for appropriation

≈ design for the unexpected

an oxymoron?

Berlin 12th Feb 2008

design guidance

- allow interpretation
- provide visibility
- expose intentions
- support not control
- plugability and configuration
- encourage sharing
- learn from appropriation

Berlin 12th Feb 2008

example - onCue

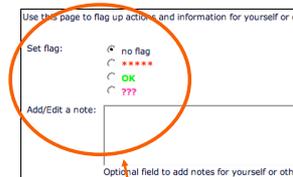

- suggestions based on clipboard
- observed use:
 - open blank temp doc
 - type in words
 - do 'copy'
 - use onCue
 - discard temp doc
- learn from appropriation
 - redesign had pop-down type-in area

Berlin 12th Feb 2008

example - eCommerce

- requirement – marker for uncompleted orders
- guidelines:
 - support not control
 - allow interpretation
- provided:
 - uncommitted 'flag'
 - plain text comment
- appropriation
 - use to mark need to restock

no rocket science here!

Berlin 12th Feb 2008

.. SO

- you can design for appropriation
- often seems trivial but really powerful
- needs humility

Berlin 12th Feb 2008

... and now ...

- Web2.0 ... community content + mashups
adoption = appropriation?
- what about end-user mashups
(not just the techie ones!)
 - e.g. mscape, HP location-aware design framework
 - UI + infrastructure issues (e.g. local resource URIs)
- mashups in the home?
(hard enough with wires!)
 - not just usability - Green agenda too

Berlin 12th Feb 2008

summary

- useful and usable not enough
- things need to be used
- adoption – from no use to use
 - think path
- appropriation – from use to personal use
 - think enable
- maybe coming together?

Berlin 12th Feb 2008
